User Roles Guide

ZPlus Manpower app · for Agency Admins

https://zplus.epf-dashboard.online
November 2026

You are the **Admin** of your agency in the app. You can add logins for your staff and for the Project In-charges (PIs) of your projects. Every login sees **only your agency's data**: clients, contracts, employees, attendance and bills of the other agency are never shown to it and cannot be changed by it.

The four roles

Role	Who it is for	Can do	Cannot do
Admin	Head of the agency	• Everything for the agency: masters, employees, attendance, sub-bills, tax invoices, letters • Add and edit logins (Setup → Users) • Data Upload from Excel • Unlock a locked month	• See the other agency's data • Create a login that works for both agencies
Accounts	Billing / accounts clerk	• Add and edit clients, GeM contracts, projects, posts and employees • Make sub-bills, approve them, mark them paid • Make tax invoices • See bank details, employee documents and the salary payout sheet	• Add logins • Data Upload • Unlock a locked month
Operator	Data entry / attendance person	• Mark attendance every month • Check the attendance a PI submitted against the signed PDF • Correct days (every correction is recorded) • Approve and lock the month – the sub-bill is then made automatically • View masters, bills and invoices	• Add or edit masters and employees • Make or approve bills • See bank details or the salary sheet • Unlock a month
PI (Project In-charge)	Project In-charge at the client (ICMR)	• Mark and submit attendance for **their own projects only** • Download the attendance PDF, sign it and upload the signed copy • See the sub-bills of their projects	• See any other project • Change attendance after submitting • Use any other part of the app

How the work flows each month

1 PI
Marks attendance in the app and submits. A PDF is made automatically; the PI signs it and uploads it or e-mails it to the agency.

2 Operator
Tallies the app with the signed PDF, corrects any day if needed, then approves and locks the month. The sub-bill is made automatically.

3 Accounts
Checks and approves the sub-bill, makes the tax invoice in one click, and marks it paid when payment comes.

4 Admin
Manages logins and masters, and unlocks a month if something must be redone.

In a small office one person can do all of this with the Admin login. Separate Accounts and Operator logins are useful when staff are added: an Operator cannot change rates, bank details or bills.

How to add a login

1. Sign in and open **Setup → Users → Add user**.
2. Enter the **Name**, **E-mail** (used to sign in) and **Mobile**.
3. Choose the **Role**: Admin, Accounts, Operator or PI. For a **PI**, tick the projects they are in charge of.
4. **Works for** is filled with your agency automatically.
5. Type a **temporary password** and save. Give it to the person directly (in person or by phone), not in a group chat.
6. At first sign-in the app asks them to choose their own password.

To stop someone using the app, edit the login and untick **Active**. To reset a forgotten password, edit the login and type a new temporary password; they will be signed out everywhere and must choose a new one.

Good practice

- One login per person – never share a login, so the record shows who did what.
- Always click **Sign out** on a shared office computer.
- Five wrong passwords lock that login for 15 minutes. If someone is locked out, the Admin can reset the password.
- Every entry, change, approval and download is recorded with the user's name and time.
